Abstract of JP2003122702

PROBLEM TO BE SOLVED: To provide a storage device by which access from a host device can be performed at high speed.
SOLUTION: A transfer command to be indicated next is predicted from a transfer command received from the host device 1 by using a data table 8 provided in a control part 3 of the storage device 2, data the transfer of which is instructed is prepared in a buffer memory, when the next command is actually received, the contents are discriminated and the data is immediately transferred in the case of a transfer request of the predicted data.
